新登场的 WaveSecure 手机保安系统，对曾遗失手机的人来说无疑是一个喜讯。它不但能保障遗失手机内的资料不外泄，而且还有助于失主找回手机；又能遥控删除手机内的资料，也可以轻易让资料还原。

它的四大功能，为手机用户提供更多保障：

上锁 用户可以遥控为手机上锁，别人捡到遗失的手机也无法使用，即使对方换上新的SIM卡，或重新启动手机，手机依旧是锁上的。

追踪 一旦遗失手机内的SIM卡被换，失主将能获得新SIM卡的号码，以及手机的电话通讯、简讯记录，都能一一掌握，协助失主找回手机。

备份和还原 在获得手机用户的同意后，手机内的资料包括电话号码、简讯、相片都将自动在系统内更新、备份。找回手机或购买新手机后，原本存在遗失手机里头的资料时，就能轻易还原。

清除 一旦手机遗失，失主可以遥控删除手机内的部分或所有数据，保障隐私。

这个服务由本地起步公司十方科技 (tenCube) 开放，公司在两年前成立，一直专注在为本地企业和政府机构提供手机保安服务。

目前，这个服务支持大约140台不同款式的手机，公司正不断添加更多手机的款式。

在本月初正式推出，这个服务正给予三个月的免费试用。

Lost Your Mobile Phone? Data Leakage Can Be Prevented

Delete data remotely and track whereabouts of phone

The newly introduced WaveSecure handphone security system doubtlessly comes as good news for those who have lost their handphones before. It not only safeguards the data stored inside the phone to prevent any information leak, but even assists the owner to trace back the lost phone. Moreover, it can remotely delete all data stored inside the phone, and can just as easily restore the same data.

Its four major functions to ensure security for handphone owners are:

Locking

The owner can remotely lock the phone, rendering it useless to anyone who picks it up. Even when a new SIM card is inserted or when the user reboots the phone, it remains locked.

Tracking

Once a new SIM card is inserted into the phone, the owner can obtain the new handphone number of that SIM card, along with all other communications and SMS messages to assist in tracking down the lost phone.

Back-up and Restoration

Under the consent of the handphone owner, all data in the handphone including contacts, SMS messages and photographs, can be automatically backed-up and updated in the system. Upon retrieving the lost phone or purchase of a new phone, all the original data can be easily restored back into the phone.

Deletion

Once the handphone is lost, the owner can choose to remotely delete all data stored in the handphone, safeguarding his or her privacy.

This service is provided by a local company, tenCube, which started up two years ago. The focus of tenCube has always been to provide mobile phone security services to local enterprises and government organizations.

Currently, this service supports about 140 phone models, with the company constantly adding more.

Launching this month, the WaveSecure service is offering complimentary 3-month trials.
